BRITTANY KEITH
PORTFOLIO SITE CASE STUDY
FRONTEND DEVELOPMENT FOR DESIGNERS SPECIALIZATION

Overview

This project allowed me to accomplish two goals: first, I created a (rough) portfolio site to showcase my work as a UX designer; second, I learned to basics of HTML/CSS/JavaScript and I will be able to speak "code" with developers I work with on future designs.

Context & Challenge

Purpose – To build a portfolio site using HTML/CSS/and JavaScript. To learn the basics of coding to better understand the limitations that my designs may face in the future and to more easily communicate with developers.

Problem – As a newly minted UX designer, I needed a place to house my projects – a portfolio. Having always been curious about writing code, but never having the opportunity or guidance to learn, I decided to enroll in the Frontend Development for Designers specialization. The aim was to create a portfolio site from scratch and learn a bit that will help me to communicate with developers in the future.

Timeline – December 2021 & January 2022
